INSTRUCTIONAL DESIGN / PROJECT CASE STUDY

Regenerative Grazing Methods in Natura 2000 Areas

An evidence-based case study from a Moodle course with 13 H5P activities

LEARNING DESIGN | MOODLE | H5P | ADULT LEARNING

02 / PROJECT BRIEF

The learning challenge

Making specialist knowledge easier to navigate, understand and apply in a self-paced online course.

CONTEXT

Regenerative grazing, grassland management and Natura 2000 areas: an information-rich professional subject requiring clear structure and explanation.

DESIGN RESPONSE

Five course sections (0–4): orientation, regenerative farming, grassland ecology / Natura 2000, practical grazing principles and course closure.

INTENDED LEARNING VALUE

Support understanding of key concepts and encourage learners to connect professional information with practical decisions.

DEVELOPMENT SCOPE

Learning-objective planning, structuring expert content, Moodle course implementation, H5P activities and formative assessment.

03 / DESIGN APPROACH

Designed for learning, not for scrolling

A learning sequence planned from outcomes to content, interaction and feedback.

01 LEARNING OBJECTIVES

Identify what learners should understand or be able to do.

02 CONTENT STRUCTURE

Divide complex knowledge into focused, manageable units.

03 ACTIVE LEARNING

Add questions, videos, contextual prompts and reflection.

04 FORMATIVE FEEDBACK

Let learners check understanding before moving on.

Design principles: Bloom’s taxonomy • Adult learning • Formative assessment

04 / LEARNER JOURNEY

A structured Moodle course

Five verified sections in the course backup: introductory orientation, three subject sections and closing activities.

0 / START
Orientation + diagnostic

›

1 / CONCEPTS
Regenerative farming

›

2 / ECOLOGY
Grassland + Natura 2000

›

3 / APPLY
Grazing decisions

›

4 / CLOSE
Final check + resources

DESIGN INTENT

The Moodle backup verifies five numbered sections (0–4), a preliminary knowledge check, videos, prompts and 13 H5P activities. Learners encounter reflection and decision exercises as well as short self-checks. This describes delivered content, not measured learning impact.

05 / MOODLE DEVELOPMENT

From design to a working course

Screenshots from the original Moodle project show the implemented learning environment.

Source: original course screenshot

LEARNER ORIENTATION

A dedicated welcome area introduces the course and helps learners find their way around the learning space.

MOODLE IMPLEMENTATION

Course navigation, learning pages and structured content are implemented within the LMS.

06 / INTERACTIONS

A decision with consequences

Actual branching-scenario content extracted from the Moodle H5P package (activity 3.5).

SCENARIO / ONE PARCEL, ONE WEEK AFTER GRAZING

Vegetation is low, some trampling is visible and rainfall has been limited. The learner manages this parcel and must choose what to do next.

A / RETURN ANIMALS NOW

Feedback: returning too early can weaken vegetation and increase trampling.

B / ALLOW RECOVERY TIME

Feedback: a good decision; the parcel receives time to regenerate.

C / INCREASE SHORT-TERM PRESSURE

Feedback: extra pressure is likely to further degrade the parcel.

Case-based interactive companion: Regenerative_Grazing_Interactive_Demo.html

Reconstructed demonstration; translated and abbreviated from the Hungarian scenario.

07 / CONTRIBUTION

My role & transferable capabilities

A practical example of independent digital learning development.

INSTRUCTIONAL DESIGN

Progressive course sequence, diagnostic checks, reflective prompts and scenario-based practice grounded in the course backup.

CONTENT DEVELOPMENT

Transforming complex expert information into clear, focused and manageable learning units.

DIGITAL IMPLEMENTATION

Moodle course structure and 13 H5P activities confirmed by backup. Lumi, SCORM and iSpring are listed in the original portfolio toolset.

PROJECT WORK

Course and activity development documented in the project portfolio; the backup verifies the implemented course materials.

Explore the learning experience

Four offline, browser-based examples adapted from the course.

01 Prior Knowledge Check

Identify learning needs before instruction.

OPEN INTERACTIVE SAMPLE >

02 Reading the Grassland

Interpret field indicators and receive feedback.

OPEN INTERACTIVE SAMPLE >

03 A Parcel Management Decision

Explore consequences of a management choice.

OPEN INTERACTIVE SAMPLE >

04 Practical Knowledge Check

Apply core principles with formative feedback.

OPEN INTERACTIVE SAMPLE >

HOW TO TRY THE INTERACTIVE DEMOS
Open Markos_Maria_Portfolio.html in a browser.
Select one of the four demonstrations in the left menu.
The HTML portfolio also includes a PDF viewer and download.
